

Sprint 2 Plan

Spikes:

- Figuring out a more complex data schematic to store new data
- Converting everything to Typescript

Stories:

- (2.1) As a product owner, I want to create a new release plan under an existing project. A project can have multiple release plans. (3 story points)

Tasks:

- Add routes for updating the existing products (3 points)
- (2.2) As a product owner, I want to create high-level goals for a release plan (5 story points)

Tasks:

- Create the page using react (5 story points)
- (2.3) As a product owner, I want to create high-level stories for a release plan: (5 story points)

Tasks:

- Create the release plan tab using react (3 story points)
- Add the component to the main page (2 story points)
- (2.4) As a team member, I want to organize high-level stories into sprints. (5 story points)

Tasks:

- Create react components for each of the high level stories (3 story points)
- Add routes for updating sprints (2 story points)
- (2.5) As a product owner, I can finalize the release plan and create a version. Once a version is released, it cannot be modified. (2 story points)

Tasks:

- Set the permissions on the backend to permanently keep the release plan version
